Subject: Monthly Report

Jim,

When we run the monthly report, we only count samples submitted to Amherst (with numbers below 200000), so the samples submitted to Boston and analyzed in Amherst are not counted twice when we tally the combined monthly report. Does this account for some of the discrepancies? If you delete samples with numbers over 200000 from Excel maybe things will add up. Sharon can show you a report that counts both Amherst and Boston numbers.
